Tropical Conservation Biology

Synopsis

This introductory textbook examines diminishing terrestrial and aquatic habitats in the tropics, covering a broad range of topics including the fate of the coral reefs; the impact of agriculture, urbanization, and logging on habitat depletion; and the effects of fire on plants and animal survival.

Includes case studies and interviews with prominent conservation scientists to help situate key concepts in a real world context Covers a broad range of topics including: the fate of the coral reefs; the impact of agriculture, urbanization, and logging on habitat depletion; and the effects of fire on plants and animal survival Highlights conservation successes in the region, and emphasizes the need to integrate social issues, such as human hunger, into a tangible conservation plan

Documents the current state of the field as it looks for ways to predict future outcomes and lessen human impact “Sodhi et al. have done a masterful job of compiling a great deal of literature from around the tropical realm, and they have laid out the book in a fruitful and straightforward manner” I plan to use it as a reference and as supplemental reading for several courses and I would encourage others to do the same. • Ecology, 90(4), 2009, pp. 1144–1145

Book Information

Paperback: 344 pages

Publisher: Wiley-Blackwell; 1 edition (November 28, 2007)

Language: English

ISBN-10: 1405150734

ISBN-13: 978-1405150736

Product Dimensions: 6.8 x 0.6 x 9.8 inches

Shipping Weight: 1.5 pounds (View shipping rates and policies)
