Customer Reviews

With most the schools in this country turning to common core math I thought this would be helpful for my daughter who is in 6th grade. Unfortunately this doesn't show as much as I expected. It may work for others but just didn't cut it for us.

I bought this for my daughter in the 5th grade. I noticed that a lot of the material that she is covering in 5th grade is listed on this so I knew that I'd get at least 2 years of use out of it. It is an excellent resource to have sitting on the desk while doing math homework.

Not the most user friendly and I am not sure that it aligns completely with the spirit of common core, but does show some examples that do. I would not buy a class set for all of my students like I had planned. Glad I bought 1 to check it out first.

My daughter is enrolled in home school and while she would normally be in sixth grade, she is ahead with her math so I enrolled her in seventh grade. However, she still had to take NC standardized testing for sixth grade, so I bought this to make sure she could cover all the areas she may not have studied. It was a great help to her. Would definitely recommend it as a great study aid.

This is a perfect, laminated reference guide for anyone teaching 6th grade math. A must have to keep up with the CCSS!!

This is an easy way to keep check with the required objectives. I like the laminated version. Very good resource.

I love the way BarCharts has placed all the topics for each grade on one durable, laminated study guide. Each of the standards are highlighted through easy to understand explanations and illustrated with examples! A must-have for teachers, students, and the parents who help them with homework!!!

Great "cheat sheet" for frameworks!
